

LEAN TO

The Rion Lean-To structure, made of the same fantastic modular PVC and polycarbonate or acrylic, is your simple, practical and attractive solution for an extended outdoor area.

The Lean To option provides height (2420mm) which the standard 2m wide greenhouse cannot do. Transparent Acrylic panels can be used on the sides to provide a SUNROOM or CONSERVATORY effect on the cool side of your house. Sit outside in a warm protected environment. This is a fast and economic way to extend your house, cover the back door or such. This distinctive design will enhance any home and is available in white or green frame.
